

Message from the Founder & Chief Architect DataOne Asia (Thailand) Co., Ltd.

Education is the basis for a country's development. It has never been in history that we see education in its best chance to be disseminated equally and widely as in today's digital world. With the growth of the Internet, tools for effective education, assessments as well as learning aid have been revolutionized to so-called e-Education or e-Learning.

It should be an aim of every society to lay an infrastructure for its members to be able to connect to the potential of learning through the Internet. It is not only hardware and network infrastructure but also training for the majority of population to know how to take advantage of the online world to enhance their knowledge and consequently their professions and careers. Moreover, as new ideas, technology, tools, contents and courseware for e-Learning are experimented and developed all over the world, it is important that they are shared and learned across geographical and cultural boundaries

It is a delight to see the "4th International Conference on eLearning for knowledge-Based Society", which has been organized for the twenty-fourth time to provide a forum for experts and personnel in the e-Learning and e-Education circle in the Asia-Pacific region to get connected, to share and to exchange their initiatives and knowledge in implementing and practicing e-Learning. It is even more delightful to see such significant event being held in Thailand where we need more e-Learning initiatives to be implemented to distribute learning opportunity to our remote provincial areas.

A knowledge-based society is not an ideal or impossible dream but it can be a reality if we all cooperate. I wish the Conference all the best and success as the organizer endeavors.
